

# WHITEPAPER

*WWW.T-APE.IO*

# Welcome to T-Ape

T-Ape is a virtual reality blockchain game that is played from a first-person perspective using the Virtual reality method. Flu-RX has wiped out half of the human population and has resulted in a rebellion of highly intelligent apes. Role-player of an ape imprisoned in a research facility by humans looking for a cure.

The player's goal is to defend himself and rejoin Avi's group of monkeys. Along the way, players team up with two other captured apes, Ytre and Rtai.

T-Ape is a game played on a linear path, with the player performing ape-like movements to advance to a predetermined place in the environment.

Human guards throughout the game and must be killed before continuing. Players can use three types of weapons, and can take cover during firefights. Players can also climb pipes and swing from the ceiling

# What is metaverse ?

Metaverse is a virtual world designed to connect worldwide users with a shared digital platform to interact and socialize. Companies building their metaverse projects leverage leading technologies such as 3D reconstruction, augmented reality, virtual reality, IoT, artificial intelligence, and blockchain to develop powerful versions of Metaverse.

The persistent nature of the Metaverse attracts people the most. It means that players are not required to switch on or exit the gaming platform, and it exists even after they finish playing their session. In addition, Metaverse creates excitement among players by providing virtual space for the digital replication of our real world.

Players can have a close-to-reality experience while playing games on the Metaverse platform. They can interact with other players, trade in-game assets, and even experience a physical sense of touch using haptic gloves and jackets. Note that in-game items in the metaverse games carry real-world value. It means that players can earn real money by selling their virtual assets in the Metaverse via NFTs.

# Evolution of Online Gaming

## *Gaming before Metaverse*

Before the advent of blockchain-powered games, players were much into multiplayer games. However, blockchain has significantly changed the face of online games. Its use cases like NFTs and cryptocurrencies amaze players with features like tokenization of gaming items and the facility to trade them to earn money in cryptos. Depending on the specific rules of the games, players can either sell their assets or collect them until they yield rewards from the platform. People with an inclination towards real money games and crypto spaces are the ones who hailed the popularity of NFT games worldwide. Besides the yield, such games became prevalent due to the high-quality visual representation of real-life objects and impressive graphics.

## *Gaming after Metaverse*

The recent evolution in the gaming industry has brought along the Metaverse games. Players are entering into the realm of Metaverse to experience next-level gaming. While Metaverse can either be centralized or decentralized, gaming companies focus more on decentralized projects since the future is decentralized. Stick around to visualize the Metaverse games and help players understand how it works.

# THE MARKET

There is no doubt that Virtual Reality will change our world. With time critical, we've been waiting for the right one the moment when technology and adoption will enable us to be the best in the market. Thanks to the combination of several newly created technology, what we can send to virtual glasses yet possible in virtual reality in multiplayer very far. Putting together a winning combination best-in-class technology solutions including Oculus, Unreal Engine, Blender, Capture Reality, Capture Motion, Face Catch and our own technology, both of which will determine the trend and set a solid foundation for our future evolution as we create a world without equivalent. Our analysis and research on our market and competitors have gave us significant insight into the challenges they face and various faults that they have made, either through bad timing or Inappropriate choice of technology will limit their future development and ability to be upgraded. Unlike some of our competitors, T-Ape metaverse is a Game built for the future. We has been specially designed for completely can be improved, with our graphics and the world's capabilities continue to increase in line with the latest blockchain innovations, and games sector. We will never be silent the world will continue to grow into the future.

## AR and VR technologies

AR (augmented reality) and VR (virtual reality) create an immersive and exciting 3D experience that are the key technologies powering Metaverse development. AR morphs the real world and creates a virtual world using visual elements and characters. It supports smartphones and various digital devices so that users can enjoy on-the-go immersive experiences.

# GAME PLAY

Since the outbreak, "Flu-RX" has wiped out half of humanity and made other primates...transformed. You are an ape with advanced intelligence, captured and held in a heavily fortified scientific facility as humanity desperately searches for a cure. Your Mission: Climb, jump and shoot through the chaos of an apocalyptic world to escape with your fellow apes and return home at the intersection of two species' destiny.
